1. Waterfall methods are not flexible to changes that may occur during the project.

2. It's better to spend time on making a working software than documentation; customers wanted a workable product first.

Instead of following a strict plan, respond to changes ; the outcome will be a better product.

3.

a) Decides the order of the Product Backlog = Product Owner

b) Decides how to build a feature = Developers

c) Helps the team when a test server has been down for two days = Scrum Master

d) Talks to customers about what they need = Product Owner

e) Coaches the team when the Daily Scrum takes 45 minutes = Scrum Master

4. New implementation will be considered during the next sprint. Also, the CEO should talk to the Product Owner; the Product Owner then puts it in the backlog and decides when to implement it.

5. Sprint Review = present the product , participants the customer, Scrum team (Product Owner, Developers, Scrum Master)

Sprint Retrospective = how did the team work go , participants Scrum team

Sprint Review focuses on the product, Sprint Retrospective focuses on the team effort

6.

a) Add login

As a registered customer,

I want to log into my account with a password,

So that I can securely access my personal settings and view my order history.

b) Export orders to Excel

As a finance administrator,

I want to export a list of all orders into an Excel file,

So that I can easily compile monthly reports and analyze financial data.

c) Dark mode

As a frequent system user,

I want to switch the interface to a dark theme,

So that I can reduce eye strain when working on the screen at night.

7.

the customer needs to be logged in and have a order history page

A click "Buy Again" button next to a previously purchased item,

the item should be added to their shopping cart, and they should be redirected to the cart summary.

8. A example of Definition of Done for a team of four developers.

The code has been reviewed and approved by the product owner or the person who bears primary responsibility.

The program needs to be functional and pass error tests.

The program should fulfill the customer-asked requirements .

Any potential necessary documentation should be done.

Final code has been merged to the master file in GitHub. So it's available for testing teams and reviews.

9. Daily Scrum should only be a fast 15 -minute meeting. Also, it's not a meeting where a manager needs to be at since the purpose of the meeting is for developers to discuss the project.

10.

a) A team building a new mobile app = scrum

b) An IT support desk = kanban

c) A team fixing bugs in a webshop that is already live = kanban

11. Let the developer reason behind their choice: why 13 and why 2?
